

会话管理器管理着应用中所有Subject的会话的创建、维护、删除、失效、验证等工作

实现了CacheManagerAware+SessionManager接口

AbstractSessionManager

NativeSessionManager

AbstractNativeSessionManager

AbstractValidatingSessionManager

DefaultSessionManager

DefaultWebSessionManager

ServletContainerSessionManager

Authenticator

Authorizer

CacheManagerAware

SecurityManager

CachingSecurityManager

RealmSecurityManager

AuthenticatingSecurityManager

AuthorizingSecurityManager

SessionsSecurityManager

DefaultSecurityManager

DefaultWebSecurityManager

WebSecurityManager

Destroyable

Destroyable

CacheManagerAware

WebSessionManager

ValidatingSessionManager

SessionManager

setRealms(Collection<Realm> realms)-父子super

把会话管理委托给SessionManager对象

```
public DefaultSessionManager() {  
    this.deleteInvalidSessions = true;  
    this.sessionFactory = new SimpleSessionFactory();  
    this.sessionDAO = new MemorySessionDAO();  
}
```

默认管理SessionDAO和SessionFactory
